HERITAGE OF BANGLADESH

A website to explore the heritage places of Bangladesh

Explore • Learn • Plan • Share

Made with Django

Introduction & Problem

Bangladesh has many historical, cultural and natural heritage places.

But information about these places is often found in different websites and sources.

Visitors may find it difficult to:

- Find information about a place.
- See its location on a map.
- Plan a trip and estimate the cost.
- Save visited places and share experiences.

My Proposed Solution

I am developing a website called Heritage of Bangladesh.

The website will bring heritage information and basic travel tools together.

- Users can explore places on an interactive map of Bangladesh.
- They can read details, view photos and listen to audio guides.
- They can plan trips and calculate estimated expenses.
- They can share reviews, comments and travel stories.

The website will support both Bangla and English.

Main Features

1. Explore places by division
2. Photo gallery and 360° view
3. Plan a trip with many places
4. Estimate travel costs
5. Save visited and wishlist places
6. Bangla and English audio guide
7. Reviews and ratings
8. Find nearby heritage places
9. Share travel stories and photos
10. Admin can manage website content

System & Technology

How the website works

Technologies used

- Frontend: HTML, CSS and JavaScript
- Backend: Python and Django
- Database: SQLite
- Map: Leaflet and OpenStreetMap

User Workflow & Expected Result

A user can follow these simple steps:

- Open the website and choose a division or search for a place.
- Click a place on the map to see its details.
- Read information and view photos or audio.
- Sign in to save places, plan trips or write reviews.
- Share travel experiences with other users.

Expected result: one simple website for discovering and planning heritage visits in Bangladesh.

THANK YOU
